

List Of Unique Entrepreneurs !

Pavel Durov :

Pavel Durov is the founder and owner of messaging app Telegram, which has more than 500 million users worldwide. Durov has made Telegram free to use; it competes with messaging apps like WhatsApp, which is owned by Facebook. Durov is known as Russia's Zuckerberg because he also created Vkontakte, Russia's biggest social network. He founded Vkontakte when he was 22; in 2015 he sold a 12% stake in the social network for an estimated \$300 million. In 2018 Pavel, with his brother Nikolai Durov, raised \$1.7 billion from investors to create TON, a blockchain system based on Telegram. Durov left Russia for Dubai after he refused to

cooperate with the Russian secret service and provide encrypted data of VkoLinux Torvald

Linus Torvalds :

As creator of the Linux operating system, Linus Torvalds is a leading supporter of Open Source software. An avid programmer, Torvalds wrote the kernel of the Linux operating system at age 21 from his mother's apartment in Helsinki. As *Wired* magazine wrote in 2003, "He posted it on the Internet and invited other programmers to improve it. Since then, tens of thousands of them have, making Linux perhaps the single largest collaborative project in the planet's history." Linux now serves as the primary foundation of Open Source used by Internet developers and companies today.

Torvalds has carefully overseen the development of Linux since its inception. In 2003, he focused exclusively on the kernel, backed by the Open Source Development Labs (OSDL), a consortium formed by high-tech companies which included IBM, Hewlett-Packard, Intel, AMD, RedHat, Novell and many others. The purpose of the consortium was to promote Linux development. OSDL merged with The Free Standards Group in January 2007, to become The Linux Foundation. As the self-described “benevolent dictator of Planet Linux,” Torvalds remains the ultimate authority on what new code is incorporated into the standard Linux kernel.

John McAfee :

John McAfee was a British-American information security pioneer who founded the global computer security software company McAfee. A highly influential figure in the field of

computer security, he was a world renowned expert on internet surveillance, global hacking scandals and threats, and personal privacy. Born to an English woman and an American soldier in the 1940s, McAfee endured a difficult childhood. His father was an abusive alcoholic who committed suicide when John was 15 years old. In spite of his troubled childhood he proved to be a good student. However, he too became addicted to alcohol and drugs, and was prone to wild, eccentric behavior. He was working on his PhD when he got thrown out of the college for having a sexual relationship with a student he mentored. He later found a job as a programmer at NASA's Institute for Space Studies in New York City. A brilliant man, he easily found jobs at reputed organizations despite his bizarre behavior and addictions. After a series of jobs he put his entrepreneurial skills to good use and founded McAfee Associates, a computer anti-virus company which he later sold. His other business ventures include Tribal Voice and QuorumEx.

Manan Shah :

Manan Shah is an Ethical Hacker, Author and Indian entrepreneur. He founded an online cyber security company, Avalance Global Solutions and serves as its Chief Executive Officer (CEO). It is an Information Technology externalizing venture entangled with securing government and enterprise digital setups. He was recognized among the top 100 Security Researcher by the Microsoft. He also has a personal blog where he shares his journey and experiences like the lessons learned, mistakes made and large gains. Moreover, he has authored several books based on cyber security, ethical hacking and web defense. As of 2020, he has a net worth of \$ 2,000,000.
